

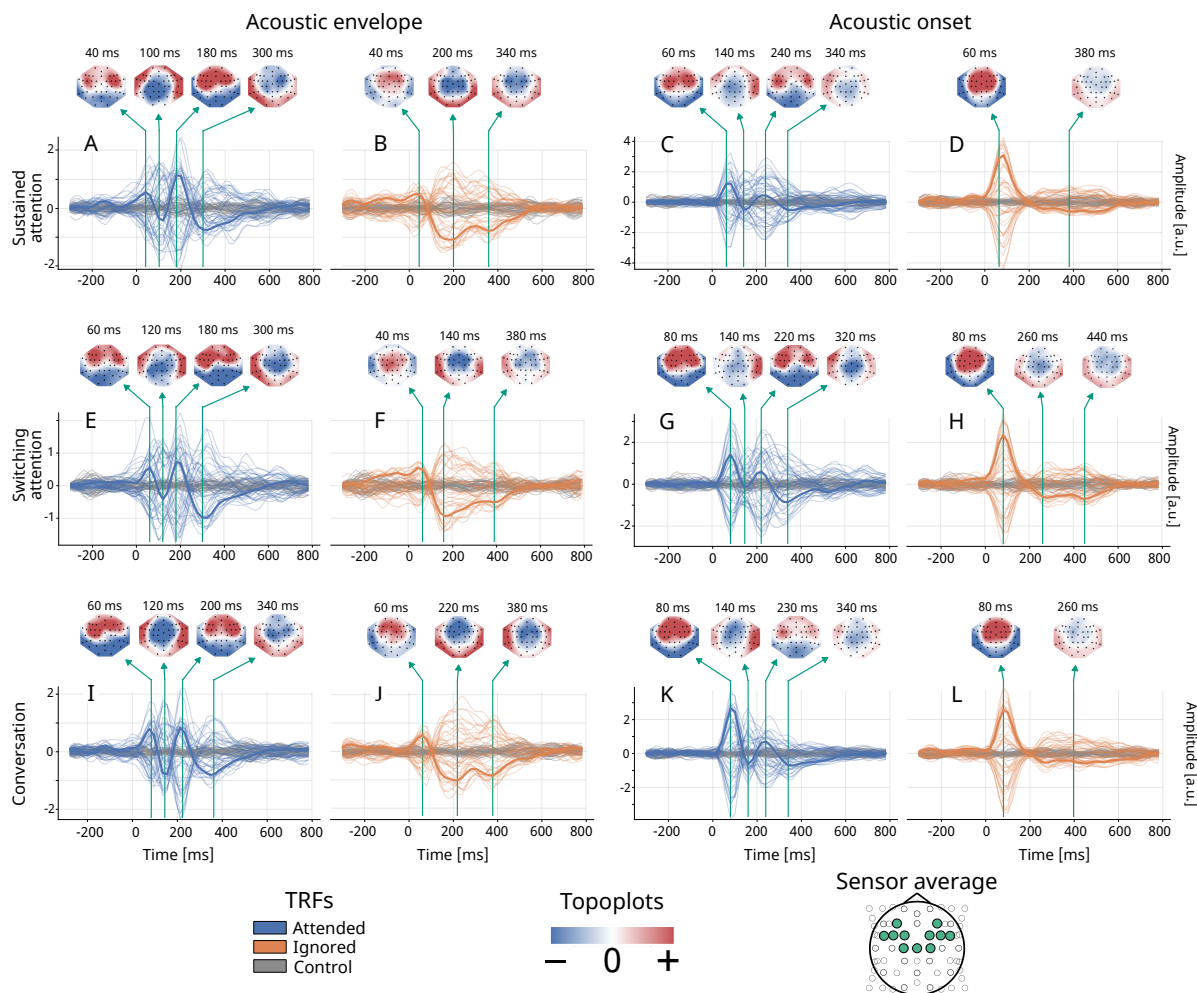

Figure 4: TRF peak analysis. TRFs for our three conditions SustAC (A-D), SwitAC (E-H), and ConvAC (I-L), shown for attended (blue) and ignored (orange), with random control speech (grey). The left two and right two columns show TRFs for the acoustic envelope and the acoustic onset, respectively. The topographic plots show spatial patterns at observed peaks of interest, where red indicates positive amplitude and blue negative amplitude. All presented plots are for the scalp EEG sensors, with the thicker lines showing the TRF channel-average, as indicated by the cap layout at the bottom.
