

Figure 6: **Correlation Analysis:** Pearson's correlation between reconstructed and real speech (backward model, 35 s) for SustAC (A), SwitAC (B), and ConvAC (C). The x -ticks indicate electrode type (scalp, cEEGrid) and speech features (acoustic envelope, acoustic onset). Boxplots show attended (blue), ignored (orange), and control (grey) speech, with the median as the black line. Significance stars mark differences of means between attended and ignored speech. No statistical tests were performed between conditions and control speech.
