

## Backward model

## Forward model

**Figure 7: Optimal lag analysis:** Pearson's correlation from backward (left) and forward (right) models for SustAC (A), SwitAC (B), and ConvAC (C), using a 45 ms overlapping time-lag windows. Each plot shows the attended (blue) and ignored (orange) speech envelope, with scalp electrodes (solid lines) and cEEGrid electrodes (dashed lines). The 95% confidence interval is shaded for each condition. Forward-model correlations are averaged across all 44 scalp and 20 cEEGrid electrodes.
